locality: Shi Lin Night Market  
The stall made a english guide for attract foreign visitor.  
keywords:[visual guide]

Vegetable stall

locality: Shi Lin Night Market  
keywords:[how to preserve farm produce] // [Demand&supply]

Map of keywords:

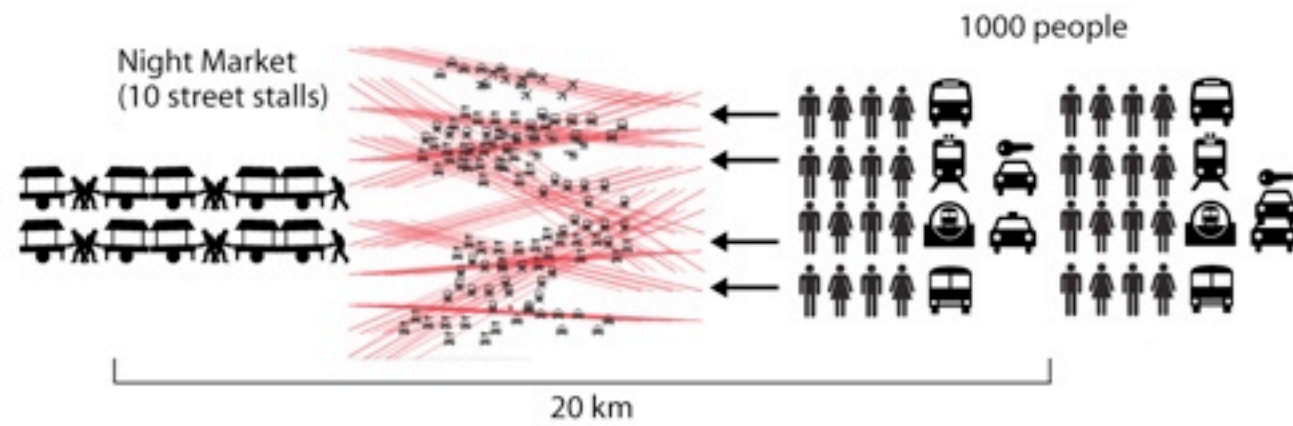

Phase 3: design

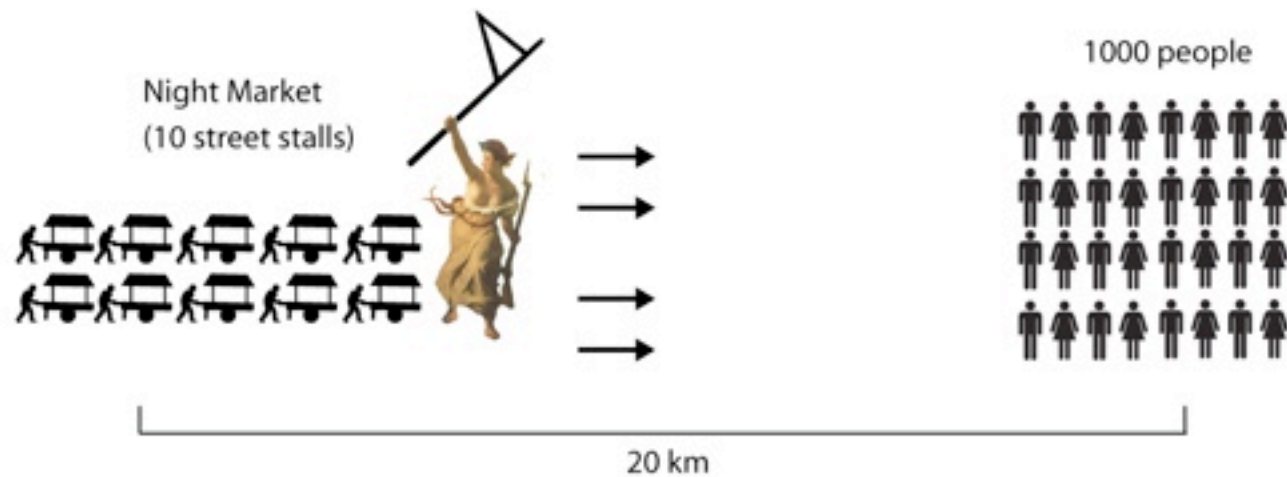

Typical night market in Taiwan

1000 people move to night market everynight. Maybe by 500 way to go there.  
Spend too much cost in transport. It's neither sustainable nor mobile.

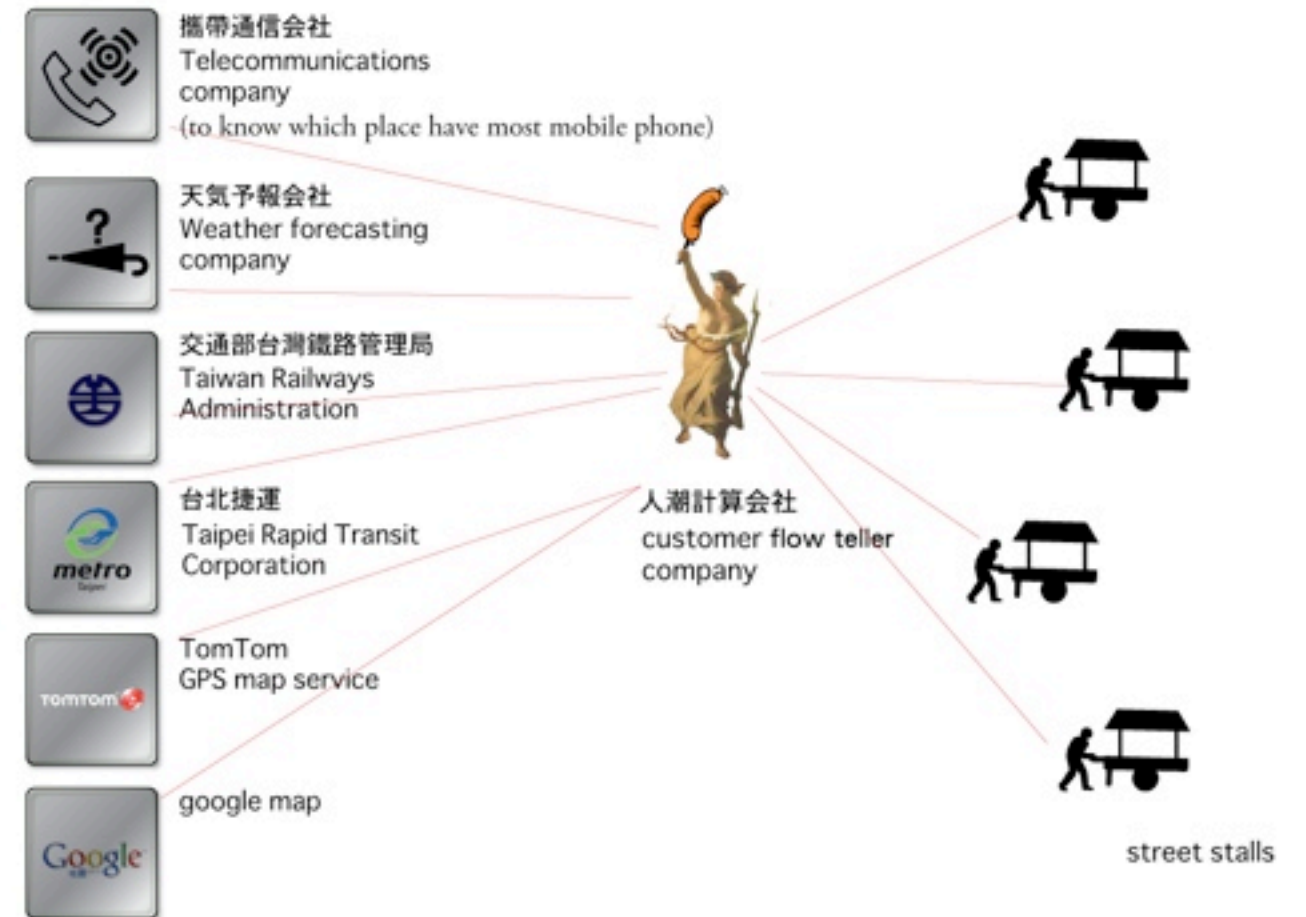

New night market in Taiwan

If we get customer flow teller, and we can precisely know where is place that have most people. Night market will move to there and offer their service. The cost about moving night market (maybe 10-20 street stalls) are really less than moving 1000 people. It's really about sustainable but also mobile.

Phase 3: design

How to forecast?

Customer Flow Teller(CFT) is a information system for street stalls, CFT will calculate each kind of information to forecast customer flow.

Even the idea is from the Taiwansque future teller, but this forecast system also suit for each country.
